

Arguably The World's Best Wheel Nut Safety System

Safety Lug Lock®

Used by major fleets worldwide
including Australia and New Zealand.
Safety Lug Lock is the proven safety
device for those serious about safety.

 **Patented**

 **Proven**

 **Awarded**

 **2 Yr Warranty**

3 Million World Wide

ZAFETY LUG LOCK®

- A SOLUTION NOT JUST AN INDICATOR
- THEY DON'T FALL OFF
- THEY DON'T STRETCH OR MELT
- 2 YEAR FACTORY BACKED WARRANTY
- AVAILABLE IN A RANGE OF STANDARD AND CORPORATE COLOURS*
- FAST & EASY INSTALL & REMOVAL
- SAVE WORKSHOP TIME & MONEY- DO TORQUE CHECKS WITHOUT REMOVAL
- REUSABLE, RECYCLABLE, LOW WHOLE OF LIFE COST
- COST EFFECTIVE, REUSABLE & RECYCLABLE

View a 2-minute video here: www.zafetyluglock.com.au

Sizes For American, Euro & Japanese Trucks & Buses.

ZAFETY LUG LOCK® REDUCE YOUR RISK NOW!

NOTE: THE INSTALLATION OF ZAFETY LUG LOCK®
DOES NOT NEGATE THE NEED FOR STANDARD SAFETY
AND MAINTENANCE PROCEDURES.

* Minimum quantity order required. ** High temperature version available for extreme heat operations. Image "Hand Tight" from Exova testing and not for operational use. Safety Lug Lock® is a Patented Product (2014) and a Registered Trademark of Tafcan Consulting Limited.

Zafety Lug Lock[®]

Arguably The World's Best Wheel Nut Safety System

chrome wheel nut caps pictured above are not included

Minimise your risk and exposure to the potentially high financial and human cost of a wheel off incident.

Wheel nuts lose torque for a number of reasons including varying rates of expansion / contraction and foreign matter behind the nut. By preventing a nut from turning, Zafety Lug Lock[®] helps maintain clamping pressure until the wheel is torque checked.

Allowing nuts to rotate *even slightly* will dramatically reduce or eliminate any remaining clamping pressure. This often leads to significant and expensive damage to your wheel end components including studs and wheels. Once loose, additional stress is applied to the remaining nuts which may also then become loose. **You simply can't afford to allow nuts to rotate even slightly.**

Zafety Lug Lock[®] is a Solution, its not just an Indicator - Simple ingenious design reduces the risk of wheel loss by securing adjacent wheel nuts together and minimising their ability to rotate. 3 million worldwide and winner of Canada's prestigious Ernest C.Manning Innovation Award.

Not Just Any Plastic - Zafety Lug Lock is the result of years of development and exhaustive testing culminating in the precise blending of three unique resins to provide the required engineering and operational properties.

Quality Guaranteed - Manufactured in Canada in a ISO-9001-2008 facility and backed by a 2 year factory warranty.

Extreme Testing - Independently tested by EXOVA for durability (over 300,000 klm) and performance for Vibration and Temperature from - 40°C up to 120° (160°C High Temp Version with transient spikes up to +232°C). EXOVA has over 3500 experts specialising in materials testing and calibration in 22 countries worldwide, see: www.exova.com

Save Workshop Time - Superior triple resin formula provides the necessary resistance to secure nuts yet its remarkable elastic qualities permits nuts to be torque checked without removal saving valuable workshop time & money.

Cost Effective, Reusable & Recyclable - Zafety Lug Lock[®] is both durable and reusable resulting in a very low whole of life cost. Existing fleets have been using the same units for over 4 years.
